

Deacom ERP: SOC 2 Certified

Giving our batch and process manufacturing customers the best data protection.

What is SOC 2?

SOC 2 is a security and compliance framework developed by the American Institute of Certified Public Accountants (AICPA). Organizations of all sizes use it to demonstrate their commitment to protecting customer data.

Why is SOC 2 important for batch and process manufacturers?

Batch and process manufacturers often handle large amounts of sensitive customer data, such as trade secrets, financial information, and personally identifiable information (PII). SOC 2 certification can help manufacturers demonstrate to their customers that they are taking steps to protect their data.

What did Deacom have to do to earn SOC 2 certification?

To get SOC 2 certified, Deacom engaged with a qualified independent auditor to assess our security and compliance controls.

The auditor issued a SOC 2 report describing the controls and whether Deacom met the SOC 2 standards.

Here are some specific examples of things that Deacom did to become SOC 2 certified:

- Developed and implemented a security policy that defines the company's security requirements and procedures.
- Conducted regular security awareness training for employees.
- Implemented a multi-factor authentication system for all users.
- Installed and configured firewalls and intrusion detection systems to protect the company's network.
- Encrypted all sensitive data.
- Developed and implemented a disaster recovery plan.
- Had its security controls audited by a qualified independent auditor.

By taking these steps, Deacom demonstrated its commitment to protecting customer data and achieving SOC 2 certification.

How is having Deacom SOC 2 certified able to help manufacturers?

Deacom ERP is a comprehensive software solution for batch and process manufacturers. Because Deacom is SOC 2 Certified, it can help manufacturers to:

- Improve their overall security posture.
- Reduce the risk of data breaches and other security incidents.
- Increase customer confidence and loyalty.
- Gain a competitive advantage.
- Meet compliance requirements.

Benefits of SOC 2 certification for batch and process manufacturers with Deacom ERP

SOC 2 certification provides several benefits to batch and process manufacturers, including:

- Increased protection: SOC 2 certification demonstrates that Deacom is committed to protecting customer data.
- Reduced risk: SOC 2 certification contributes to identifying and mitigating security risks, which can help to reduce data breaches and other security incidents.
- Improved compliance: SOC 2 certification helps to meet various compliance requirements, such as those related to the General Data Protection Regulation (GDPR) and the California Consumer Privacy Act (CCPA).
- Competitive advantage: SOC 2 certification can give you a competitive advantage over other manufacturers who are not certified.

By utilizing Deacom and the SOC 2 certification, batch and process manufacturers can demonstrate their commitment to protecting customer data. Manufacturers can improve their overall security posture, reduce the risk of data breaches, increase customer confidence, and gain a competitive advantage. Customers of batch and process manufacturers with Deacom ERP can also benefit from SOC 2 certification by increasing their confidence in their suppliers, reducing their risk of data breaches, and improving compliance.
