

Project Planning for Ridder iQ

Project-driven production is complex. It requires continuous coordination between engineering, procurement, production & assembly, and the necessary resources. If this process does not run optimally, delays in production and delivery times can occur. This costs money and damages customer confidence. With Project Planning for Ridder iQ, you can easily manage your projects, providing real-time insights into all ongoing projects.

Ridder iQ Project Planning is an integral part of your complete Ridder iQ system. This is a significant advantage over traditional ERP systems without integrated Project Planning. In Ridder iQ, production, assembly, budget monitoring, production planning, and service planning are fully aligned. In project planning, you have continuous graphical insight into the progress of your phases, budgets, milestones, (sub)orders, the availability of materials, and the load on resources in your company. This is always in real-time. You always have the most up-to-date information. The planning is multi-user, allowing multiple people to plan simultaneously, unlike many other planning packages.

Graphical planning board

Project Planning offers a 'state of the art' four-panel planning screen. In this overview, you can see your projects, including project structures, your Gantt chart, available resources, and resource capacity. Thanks to various smart indicators, you can immediately identify bottlenecks and make necessary adjustments promptly.

In one overview, all projects, including project structures, Gantt chart, resources, and capacity.

Cost versus Progress

In Ridder iQ project planning, you immediately have insight into the progress of various project components and can make immediate adjustments. You can see your budgets right away, allowing you to make financial adjustments as well. Of course, you want to ensure that you deliver your project within budget, therefore it shows the financial progress, which is a unique feature in the market.

Rough Planning versus Detailed Planning

In Ridder iQ Project Planning, you can quickly create rough planning at the departmental level during the quotation stage. This provides a clear insight into the impact of accepting a project on your current schedule. During the project, you can gradually change the rough planning into a detailed plan.

Material Status

Project-driven companies not only need insight into internal resources but also into your procurement and outsourcing. In Ridder iQ project planning, the material status is fully integrated. Through graphical icons, you can see at a high level in the planning whether material is being ordered late or received late. When you notice this, you can zoom in on the material status per project or for all projects to determine which materials are involved.

Integrated Solution

Ridder iQ Project Planning is fully integrated into Ridder iQ. The advantage of this is that you control your entire project from the planning board. Need to create an additional (sub) order, phase, budget, or milestone? You can do

that directly from the planning board, without having to go back to a base screen. This allows you to work very quickly and efficiently. Ridder iQ Project Planning is also fully integrated with our CRM solution. This means that you have immediate insight into vacation days and sick leave in the capacity overview.

Project management for your company?
